PROFILE

AI/ML Engineer with 6+ years of AI/ML experience and 8 years of total professional experience, architecting and deploying high-impact AI solutions across enterprise and healthcare domains. Specialized in Generative AI, LLMOps, RAG, and end-to-end ML pipelines on Azure and AWS. Proven track record of delivering measurable business value, ensuring GDPR/HIPAA compliance, and partnering with Finance, IT, and business stakeholders to translate AI models into reliable production outcomes.

WORK EXPERIENCE

AI/ML Engineer 2024/12 – present
Mobinext Technologies Pvt Ltd — Client: Lanxess India Pvt Ltd *Navi Mumbai, India*

- Built and deployed enterprise GenAI/LLM applications integrated into core business workflows, with CI/CD on Azure DevOps and horizontally scalable deployments on Azure Kubernetes Service (AKS) using Apache Spark for large-scale data processing
- Engineered Retrieval-Augmented Generation (RAG) and autonomous AI Agent systems with LangChain and LangGraph for precise domain-specific knowledge retrieval
- Designed the Correspondence Management System processing 500–700 emails/day with vendor, legal-entity, and region classification plus SharePoint and DIAP write-back, achieving a 96% reduction in manual effort
- Developed Accounts Payable automation tooling, including an Invoice Status Tool bot and its integration into the CMACC "Mahnung" (dunning) workflow, enabling automated, context-aware invoice-status responses
- Established continuous model-monitoring frameworks ensuring reliability, GDPR/data-governance compliance, and consistent business value

AI/ML Engineer 2024/03 – 2024/12
Cocolevio LLP India *Noida, India*

- Built the Levi AI recruitment platform automating resume parsing, dynamic interview-question generation, and candidate evaluation, with Whisper AI transcription and AI-driven scoring
- Fine-tuned Microsoft Phi-3.5 with MLflow and DVC, orchestrated pipelines with Airflow, and deployed on AWS SageMaker, reducing screening time by 65%

R&D EEG Machine Learning Engineer 2023/08 – 2024/01
Smart Rotamach Pvt Ltd *Hyderabad, India*

- Developed EEG-based gesture-prediction models (Random Forest, 1D CNN in PyTorch) for an assistive healthcare application restoring communication for paralyzed individuals

Data Scientist 2020/05 – 2023/08
Sandat Web Solution *Pune, India*

- Built predictive models for financial services (loan-default and real-time fraud detection) and a Type-2 Diabetes monitoring system (RNN on CGM data) integrated with Azure ADLS Gen2, SQL Server, and Power BI
- Ensured HIPAA-compliant processing and mentored junior data scientists; reduced false claims by 80%, lowering financial risk exposure for institutional clients

Biomedical Engineer 2015/09 – 2017/10
OSR Group *Aurangabad, India*

In-plant Trainee, Instrumentation & Control Engineer 2013/01 – 2013/06
KOSO Kent Introl Ltd *Nashik, India*

EDUCATION

MS in Biomedical Engineering 2018/09 – 2019/09
University of Southampton *Southampton, UK*

B.Tech in Instrumentation & Control Engineering 2009/08 – 2013/07
Maharashtra Institute of Technology *Aurangabad, India*

SKILLS

Cloud & MLOps: Azure (AKS, ADLS Gen2, Data Factory, Key Vault, DevOps, Databricks, CosmosDB, Cognitive Search, OpenAI), AWS (SageMaker, EC2, S3, Fargate, CloudFormation), MLflow, KubeFlow, Airflow, Docker, Kubernetes, DVC, CI/CD/CT, Data Monitoring/Drift.

GenAI & ML: LangChain, LangGraph, LangFuse, RAG, AI Agents, LLMs (GPT-4 and 5 models, Azure OpenAI-4o, Mistral, Phi-3.5 Hugging face), Models through LiteLLM, Whisper AI, Deep Learning (ANN/CNN/RNN), Computer Vision, Spark, Embeddings, Azure AI Search, Azure Document Intelligence, LORA, QLORA fine tuning.

Languages & Tools: Python, R, SQL, PySpark, Scala, FastAPI, Flask, Power BI, Tableau ,CUDA, GitHub/GitHub Actions, Jira, Bitbucket, ETL/ELT.

PROJECTS

Invoice Status Tool Bot *Gen AI Project*

- Designed and deployed an Invoice Status Tool bot (Python, FastAPI) enabling business, finance, and vendor teams to retrieve real-time invoice status, payment, and approval details through natural-language queries
- Engineered robust invoice-number matching with leading-zero normalization and multi-format identifier handling to eliminate cross-vendor false matches in production
- Integrated legal-entity extraction and SAP/DIAP backend lookups across multiple LANXESS entities and regions; deployed on AKS with structured logging. **Impact:** instant, self-service visibility into the invoice lifecycle, accelerating Accounts Payable query resolution

Invoice Status Integration for the Mahnung (Dunning) Category — CMACC *Gen AI Project*

- Extended the Correspondence Management System (CMACC) to automatically handle the “Mahnung” (dunning) email category by integrating the Invoice Status Tool into the classification and response workflow
- Built logic to extract invoice numbers and legal-entity context from incoming dunning correspondence and query live invoice status for automated, context-aware draft responses
- Threaded real-time invoice-status results into approver email draft generation with strict API-first deployment discipline. **Impact:** automated triage of a high-volume category, cutting manual handling of payment-reminder emails and improving turnaround B

Correspondence Management System for EMEA and India *Gen AI Project*

- Automated AI processing of 1000+ daily emails with sophisticated multi-class classification by vendor, legal entity, and geographical country
- Integrated seamlessly with Microsoft SharePoint and DIAP write-back systems for automated enterprise workflow orchestration and data synchronization
- **Impact:** reduced manual email handling effort by 96%, accelerated response times by 80%, and improved vendor/legal-entity assignment accuracy to 98% at enterprise scale

Investment Relationship Engine *Gen AI Project*

- Processed and indexed 2,000+ financial documents and investor communications using DIAP data pipelines and Azure AI Search for advanced semantic retrieval
- Leveraged Retrieval-Augmented Generation (RAG), LangGraph orchestration, and autonomous AI Agents with persistent-memory architecture for rich contextual financial insights
- Deployed on Azure Kubernetes Service (AKS) with horizontal pod autoscaling and Langfuse-based observability (prompt tracing, latency, and cost monitoring). **Impact:** reduced document search and analysis time by 90%, empowering investor-relations teams with real-time insights

Supervisor Agent-Based Intent Routing (AskLANXESS) *Gen AI Project*

- Built a supervisor orchestrator that routes incoming queries by intent across the AskLANXESS umbrella to the right specialist bot, Investment Relationship Engine, RCH Market Mind bot, Knowledge Portal bot, and AskHR bot
- Authored per-bot agent cards describing each agent's scope and capabilities, and embedded the routing logic into the supervisor prompt so queries are classified and dispatched to the correct agent
- **Impact:** unified multiple domain bots under a single entry point with accurate intent-based routing, improving answer relevance and user experience across business functions

Marconi Delivery Agent *Gen AI Project*

- Built a delivery agent that retrieves delivered-product details and auto-generates customer response drafts for delivery enquiries arriving in the delivery RCH-CS mailbox
- Integrated Langfuse observability for prompt tracing, latency, and cost monitoring across the agent workflow
- **Impact:** automated delivery-status enquiry handling and draft creation, reducing manual effort and accelerating customer response turnaround

BOLT (Buying Optimization Legibility Transparency) *Gen AI Project*

- Developed a DIAP analysis pipeline integrating 6 data sources (5 from SAP L4P and an AAD group file), merging files and organizing material-group data by country
- Built a FastAPI application with LangChain and Azure OpenAI-4o, SQL queries, and streaming responses for real-time retrieval, applying advanced chaining and hybrid prompting strategies
- Leveraged Azure DevOps, Spark, and Blob Storage; deployed on AKS with autoscaling. **Impact:** streamlined procurement analysis across 12+ countries, cutting executive report prep from days to minutes

Levi — AI-Driven Recruitment *Gen AI Project*

- Built RAG-based resume parsing and AI-driven interview-question generation from documents using OpenAI, with real-time Whisper AI transcription and AI-powered candidate evaluation
- Fine-tuned the Phi-3 model on custom data with MLflow for model versioning and DVC for data versioning; automated data collection with Airflow and deployed artifacts to AWS SageMaker endpoints
- **Impact:** 65% efficiency gain and approximately 30% lower HR operational cost while improving candidate quality and hiring success rates

Gesture Prediction with EEG Signals for Paralyzed Individuals *ML/DL Project*

- Decoded neural signals using Random Forest ensembles and 1D CNN (PyTorch) to interpret meaningful gestures from EEG data
- Collaborated with neuroscience and assistive-technology experts to build a life-improving communication application for individuals with paralysis
- Deployed MLflow on AWS Fargate with CloudFormation for model versioning and DVC + S3 for data versioning. **Impact:** enabled new forms of patient-device interaction, improving independence and quality of life

Type-2 Diabetes Monitoring & Prediction (RNN) *ML/DL Project*

- Collected and pre-processed CGM glucose data, integrating from source to ADLS Gen2 and Azure SQL Server
- Developed predictive models (ARIMA, RNN) on historical glucose and meal records to forecast glucose levels and recommend lifestyle and medication adjustments; visualized CGM data in Power BI in real time
- **Impact:** enabled early detection of abnormal glucose trends and proactive clinical intervention, reducing complications and hospitalization risk

Predictive Analytics for Insurance Fraud Detection *ML Project*

CERTIFICATES

Microsoft Certified: AI Fundamentals (AI-900), Azure Fundamentals (AZ-900), Data Fundamentals (DP-900) • Simplilearn Certified Data Scientist Master's • Databricks Lakehouse Platform Accreditation • Google Cloud — Transformer & BERT Models, Big Data & ML Fundamentals • Coursera — MLOps Fundamentals
